

CANDAL Trader Playbook v3 — Top 25

High-Signal Exploits

Generated: from 3630 total exploits **Filtered:** L1 win rate $\geq 65\%$ + statistical significance ($p < 0.05$) **Top picks by signal volume:** 25 exploits **Expected signals/day (combined):** 81.2

How to Use This Playbook

Each exploit predicts the color of the NEXT 1-minute candle.

Trading rules: 1. Wait until ALL listed conditions are TRUE at the close of the current 1-min candle. 2. Enter trade in the listed DIRECTION (CALL if BULL, PUT if BEAR). 3. Trade duration: **1 minute** (the next candle). 4. **Martingale (RARE):** if first trade loses, enter same direction on the next bar. **Only ONE retry** — never more. 5. If the second trade also loses, **stop**. Move to next exploit.

Notes: - @hourHH = only fires at HH:00 UTC (e.g. @hour17 = 17:00 UTC) - + between conditions means ALL must be true - Mart Freq = % of trades that needed martingale (lower is better)

Risk Management

Daily Routine

1. **Run 5-10 exploits** in parallel (different assets/hours)
2. Each exploit gives 2-6 signals/day, so 25 exploits give ~100 signals/day
3. **Martingale is RARE**: only used in ~33% of losing trades as backup
4. If 3 consecutive losses occur, **stop trading for 30 minutes**

Position Sizing

- Per trade: 1-2% of account
- Martingale: same size as first trade (do NOT double)
- Daily limit: 50-70 trades (don't over-trade)
- Weekly limit: 250-300 trades

Best Hours (UTC)

- **03:00** — USDCOP RSI oversold
- **15:00** — EURUSD big green

- **17:00** — BRLUSD BB lower
- **18:00** — USDPHP MACD cross up
- **21:00** — USDMXN MACD cross down

What to Avoid

- **Don't stack martingales:** only 1 retry, then exit
- **Don't repeat same exploit** within 5 minutes
- **Don't trade illiquid hours** (deep night)
- **Don't trust any single signal** — wait for full condition match

Expected Performance

Based on top 25 exploits (statistically significant):

Metric	Conservative	Expected
Signals/day	50 (50% of total)	100
Win rate (L1 only)	65%	70%
Win rate (with martingale)	85%	88%
Daily wins (from 100)	85	88
Daily losses	15	12
Probability of 3-loss streak	0.5%	0.3%
